

Tutorial problems

1. (a) Write down a program P such that $\models_P [\text{true}] P [y == x + 2]$ holds and prove that this is so.
- (b) Write down a program P such that P contains an if-statement and

$$\models_P [\text{true}] P [z > x + y + 4]$$

holds, and prove that this is so.

2. Show that the following holds for program Prog:

$$\models_P [\text{true}] \text{Prog} [x == v - z],$$

where Prog is as follows:

```

x = 0 ;
y = 0 ;
while (!(y == z)) {
    y = y + 1 ;
    x = x - 1
}
x = x + v ;

```

3. (a) For any B_1, B_2 and P explain why $\models_P [B_1] P [B_2]$, whenever the relation $\models_t [B_1] P [B_2]$ holds.
- (b) Show that the following holds for program Prog in Exercise 2:

$$\models_t [z >= 0] \text{Prog} [x == v - z].$$

Demonstration problems

4. Use propositional logic to prove the equivalence of the following statements.

$$(a) \quad !(a == b \mid \mid a < b)$$

(b) $a \neq b \wedge \neg (b > a)$

5. Prove the partial correctness in the following cases.

(a) $\models_P [x > 0] \ y = x + 1 \ [y > 1]$

(b) $\models_P [\text{true}] \ y = x ; y = x + x + y \ [y == 3 * x]$

(c) $\models_P [x > 1] \ a = 1 ; y = x ; y = y - a \ [y > 0 \wedge x > y]$

6. Show that $\models_P [\text{true}] \ P \ [z == \min(x, y)]$, where P is the following program:

```
if (x > y) then {  
    z = y  
} else {  
    z = x  
}
```

7. Show that

(a) $\models_P [\text{true}] \ \text{Sum} \ [z == x + y]$

(b) $\models_t [0 \leq y] \ \text{Sum} \ [z == x + y]$

where Sum is the following program:

```
z = x ;  
v = y ;  
while ( !(v == 0) ) {  
    z = z + 1 ;  
    v = v - 1  
}
```
